Problem – Solution Fit Template:

Readora Bookstore addresses the common challenges faced by readers while searching, purchasing, and managing books online. Traditional bookstores often have limited availability, lack efficient search capabilities, and do not provide a convenient way to browse books across multiple categories. The proposed solution overcomes these challenges by offering a user-friendly online bookstore where users can securely register, browse books, search by category, add books to their shopping cart, place orders, and track their purchase history. Administrators can efficiently manage books, users, orders, and inventory through a centralized dashboard. The platform improves accessibility, simplifies book purchasing, and enhances the overall user experience.

Purpose:

- Provide a centralized online platform for discovering and purchasing books.
- Simplify the book browsing and ordering process with an intuitive user interface.
- Enable secure user registration, authentication, and online ordering.
- Allow administrators to efficiently manage books, inventory, and customer orders.
- Improve customer satisfaction through a fast, reliable, and responsive online bookstore experience.
- Build a scalable MERN Stack application that can support future features such as online payments, book recommendations, reviews, wishlists, and cloud deployment.
